

Nazmul Commerce

Manual QA test plan - storefront and admin panel

319 test cases across 19 areas

This document covers every feature that exists in the build - storefront, checkout, customer accounts and the full admin panel. Work through it in order: the access-control section (10) should be done before the rest of the admin sections, because everything after it assumes those controls hold.

Environment	Value
Live site	https://bidyut-commerce.vercel.app
Admin panel	https://bidyut-commerce.vercel.app/admin
Local	npm run dev -> http://localhost:3000
Make yourself admin	node scripts/make-admin.mjs your@email.com (then sign out and back in)
Make someone a manager	node scripts/make-admin.mjs their@email.com manager
Reset demo catalogue	node scripts/seed-catalog.mjs --banners --flash
Test coupons	BIDYUT10 (10%, min Tk 5,000, cap Tk 1,500) - WELCOME200 (Tk 200 off, min Tk 3,000) - EIDGIFT (7%, no minimum) - FREESHIP (Tk 150 off, min Tk 2,000)
Test phone numbers	01712345678 / +8801712345678 / 8801712345678 / 1712345678 - all must be accepted
Payment	Cash on delivery only. bKash, Nagad and card are built but hidden until credentials are configured.

How to record a result

Write P (pass) or F (fail) in the Result column. For any F, note what you saw in the Notes column - the actual behaviour, not just 'broken'. Tests marked **CRITICAL** are security or money-handling checks: if one of those fails, stop and report it before continuing.

Nazmul Commerce

Manual QA test plan - storefront and admin panel

One thing to know before you start: the homepage is cached for five minutes. If an admin change does not show up immediately on the homepage, that is expected - wait, or check the product page directly, before raising a bug.

Nazmul Commerce

Manual QA test plan - storefront and admin panel

1. Homepage

The homepage is the most-visited route and is cached for 5 minutes (revalidate = 300). If a change you made in admin is not visible, wait 5 minutes or hard-reload before raising a bug.

ID	Feature	Steps	Expected result	P/F	Notes
1.1	Hero carousel loads	Open the site root.	A full-width hero shows an eyebrow label, headline, subtitle and at least one button. The first slide's image is sharp, not stretched.		
1.2	Hero auto-advances	Stay on the homepage without moving the mouse for ~7 seconds.	The slide changes on its own roughly every 6 seconds and the active dot moves with it.		
1.3	Hero pauses on hover	Hover the pointer over the hero and wait 10 seconds.	The slide does NOT change while the pointer is over it, and resumes when you move away.		
1.4	Hero manual controls	Click the left and right arrows (bottom-right), then click each dot.	The slide changes immediately in the expected direction. The dot for the visible slide is wider/filled. No control ever overlaps the headline text.		
1.5	Hero buttons navigate	Click the primary button on each slide.	You land on the linked category listing and the results match the slide's promise (e.g. 'Shop earbuds' -> Earbuds & Headphones).		
1.6	Promo strip	Look directly beneath the hero.	A dark strip shows the free-delivery message with a working 'See delivery charges' link.		
1.7	Shop by category	Scroll to 'Shop by category'. Count the tiles and click three of them.	All 9 categories appear (Earbuds & Headphones, Power Bank, Mini UPS, Projector, Lighting, Mobile Accessories, Gaming Accessories, Smart Gadgets, Chargers & Cables). Each opens its filtered listing.		
1.8	Flash sale countdown	Find the 'Weekend flash sale' block and watch the timer for 3 seconds.	Hours/minutes/seconds tick down live. Sale prices are lower than the struck-through price and are whole Taka (no stray decimals).		
1.9	Flash sale stock bar	Look at the bar under each flash-sale product.	A red progress bar and an 'N sold of M' caption. Clicking the card opens that product.		
1.10	Flash sale expiry	In admin, set the flash sale's end time to the past, then reload the homepage.	The entire flash-sale block disappears. Sale prices no longer apply in the cart either.		

Nazmul Commerce

Manual QA test plan - storefront and admin panel

ID	Feature	Steps	Expected result	P/F	Notes
1.11	Best sellers rail	Scroll to 'Best sellers' and swipe/scroll the row horizontally.	The row scrolls smoothly with no visible scrollbar and snaps to cards. 'See all' opens /products?sort=popular.		
1.12	Featured grid	Scroll to 'Handpicked for you'.	A grid of products, each showing image, name, rating, price and an Add to cart button.		
1.13	Offer cards	Scroll to the three-up offer cards.	Each card has a coloured left border, an eyebrow, a heading and a working link.		
1.14	New arrivals rail	Scroll to 'New arrivals'.	A horizontal rail of the most recently published products.		
1.15	Customer reviews wall	Scroll to 'What customers say'.	Only appears once at least one 4+ star review is APPROVED in admin. Shows rating, quote, an abbreviated name (e.g. 'Nazmul H.') and the product.		
1.16	Why choose us	Scroll to 'Buying from Nazmul'.	Four value cards: nationwide delivery, official warranty, genuine stock, real humans.		
1.17	Delivery / warranty / contact	Scroll to the three cards above the footer.	Delivery timings, the warranty note from settings, and support hours + phone. Each 'Read more' link works.		
1.18	Empty catalogue fallback	(Optional) Unpublish every product in admin, then reload.	A tidy 'The catalogue is still being loaded' panel appears instead of empty sections. No broken layout.		

Nazmul Commerce

Manual QA test plan - storefront and admin panel

2. Header, navigation and support

The header is sticky. On mobile the category nav collapses into a drawer.

ID	Feature	Steps	Expected result	P/F	Notes
2.1	Logo returns home	Click the Nazmul logo from any page.	You land on the homepage.		
2.2	Utility strip (desktop)	Look at the thin dark bar at the very top on a desktop width.	Store tagline on the left; phone number, Track order and Delivery links on the right. The phone number is click-to-call.		
2.3	Search submits	Type 'projector' in the search box and press Enter.	You land on /products?q=projector and only matching products are listed.		
2.4	Search finds by brand and SKU	Search 'Anker', then search a SKU such as 'AK-N65'.	Both return sensible results - the search index is weighted name > brand/category > SKU > description.		
2.5	Search with no results	Search for 'qqqzzz'.	A friendly empty state with a 'Clear all filters' button, not a blank page or an error.		
2.6	Category nav (desktop)	Look at the nav row under the search bar.	'All products' plus all 9 categories. The row scrolls horizontally if the window is narrow. No category is missing.		
2.7	Cart badge	Add an item to the cart and look at the cart icon.	A blue badge shows the number of units (not lines). It updates without a manual refresh.		
2.8	Account icon (signed out)	Click the person icon while signed out.	You land on /sign-in.		
2.9	Account icon (signed in)	Sign in, then click the person icon.	You land on /account and your first name appears next to the icon on wide screens.		
2.10	Admin link visibility	Compare the nav as a customer and as an admin.	The black 'Admin' button appears ONLY for admin/manager accounts. A customer never sees it.		
2.11	Mobile drawer opens full height	On a phone (or a 375px-wide window), tap the hamburger.	The drawer covers the FULL screen height - not just the header area. 'All products' plus all 9 categories are listed, with Track order / My orders / Delivery charges / Returns pinned at the bottom.		

Nazmul Commerce

Manual QA test plan - storefront and admin panel

ID	Feature	Steps	Expected result	P/F	Notes
2.12	Mobile drawer closes	With the drawer open, tap the X, then reopen and tap the dark area outside it, then reopen and press Escape.	All three close the drawer. The page behind does not scroll while the drawer is open.		
2.13	Support widget	Click the round blue chat button, bottom-right.	A panel lists only the channels that are configured (WhatsApp, Messenger, Phone, Email). Every entry opens the correct app. No dead buttons.		
2.14	Footer links	Click every link in the footer.	All resolve - shop categories, Track order, About, Contact, FAQ, Shipping, Returns, Warranty, Privacy, Terms. None 404.		
2.15	Footer delivery table	Look at the 'Delivery charges' strip in the footer.	Four zones with fee, day range and free-delivery threshold. These MUST match /admin/settings - they are read from the database, not hardcoded.		
2.16	Newsletter signup	Enter an email in the footer and submit. Then submit the SAME email again.	First submit shows 'You are on the list.' The duplicate also succeeds quietly (no scary error) because a repeat signup is not a failure.		
2.17	Newsletter rejects bad input	Enter 'notanemail' and submit.	An inline validation error. Nothing is written.		

Nazmul Commerce

Manual QA test plan - storefront and admin panel

3. Product listing, search and filters

Filters live in the URL, so every filtered view is shareable and bookmarkable. Changing any filter resets you to page 1.

ID	Feature	Steps	Expected result	P/F	Notes
3.1	Listing loads	Open /products.	A product count ('25 products'), a sort dropdown, a filter sidebar (desktop) and a product grid.		
3.2	Category filter	Click a category in the sidebar.	Only that category's products remain, the URL gains ?category=..., the heading changes to the category name, and the count updates.		
3.3	Brand filter	Pick a brand in the sidebar.	Only that brand's products remain.		
3.4	Price range	Enter Min 1000 and Max 5000, click Go.	Only products priced between Tk 1,000 and Tk 5,000 are shown. Prices in the URL are in Taka, not paisa.		
3.5	Rating filter	Click '4 & up'.	Only products whose average rating is 4 or higher remain. (Needs approved reviews to show any effect.)		
3.6	In-stock filter	Click 'In stock only'.	Products with zero stock disappear.		
3.7	Filters combine	Apply a category AND a price range AND in-stock together.	All three narrow the results at once, and all three appear in the URL.		
3.8	Active filter count	Apply two filters, then look at the mobile 'Filters' button.	A blue badge shows the number of active filters.		
3.9	Clear all filters	With filters applied, click 'Clear all filters'.	Every filter resets and the full catalogue returns.		
3.10	Unknown category slug	Manually visit /products?category=does-not-exist.	Zero results and the empty state - NOT the full catalogue. (A bad slug must never silently show everything.)		
3.11	Sort - newest	Choose 'Newest first'.	Most recently published products first.		
3.12	Sort - price low to high	Choose 'Price: low to high'.	Prices ascend down the grid. Then choose high to low and confirm it reverses.		

Nazmul Commerce

Manual QA test plan - storefront and admin panel

ID	Feature	Steps	Expected result	P/F	Notes
3.13	Sort - popular / top rated	Choose 'Most popular', then 'Top rated'.	Ordering changes sensibly (by units sold, then by review weight).		
3.14	Sort survives filtering	Set a sort, then change a category.	The sort is preserved in the URL and still applied.		
3.15	Pagination	If more than 24 products match, scroll to the bottom.	Numbered pages with prev/next. Clicking a page scrolls back to the top and keeps all filters.		
3.16	Mobile filter drawer	On a phone, tap 'Filters'.	A bottom sheet opens covering most of the screen, with a 'Show N results' button that closes it.		
3.17	Breadcrumb	Open a category listing.	Home / Products / , each segment clickable.		
3.18	Product card contents	Look at any card.	Image, discount badge if on sale, name (max 2 lines), rating, price, struck-through compare-at price, 'Only N left' when low, and Add to cart.		
3.19	Out-of-stock card	Set a product's stock to 0 in admin, then find it in the listing.	The image is dimmed with an 'Out of stock' pill and the button is disabled and reads 'Out of stock'.		

Nazmul Commerce

Manual QA test plan - storefront and admin panel

4. Product detail page

Every field on this page is admin-editable. Nothing is hardcoded.

ID	Feature	Steps	Expected result	P/F	Notes
4.1	Page loads	Open any product from the listing.	Breadcrumb, gallery, title, price and buy box all render.		
4.2	Gallery thumbnails	Click each thumbnail under the main image.	The main image swaps. The active thumbnail has a blue border.		
4.3	Product video	Add a YouTube embed URL to a product in admin, then reopen the page.	A play tile appears after the thumbnails; clicking it plays the video in place.		
4.4	Badges	Open a product flagged New arrival and one flagged Best seller.	The matching badge shows next to the brand name.		
4.5	Price and discount	Open a product with a compare-at price.	Large price, struck-through compare-at, and a 'Save N%' badge. The percentage is rounded DOWN (never overstated).		
4.6	Stock messaging	Compare a well-stocked product with one at or below its low-stock threshold.	'In stock' in green vs 'Only N left' in amber. Zero stock shows 'Out of stock' in red and disables both buttons.		
4.7	Variant selection	On a product with variants (e.g. Soundcore P40i), click each option.	The selected option is highlighted; price and stock update to that variant. Quantity resets to 1.		
4.8	Sold-out variant	Set one variant's stock to 0 in admin, reopen the page.	That option is struck through and cannot be selected.		
4.9	Quantity clamping	Press + repeatedly beyond the available stock.	The counter stops at the available stock (or 99). The minus button stops at 1.		
4.10	Add to cart	Click Add to cart.	A success toast, the button briefly shows 'Added', and the header cart badge increments.		
4.11	Add beyond stock clamps	Set stock to 2, then add 5 to the cart.	The cart holds 2 and a warning toast explains only 2 were available. No error page.		
4.12	Buy now	Click 'Buy now'.	The item is added and you go straight to /checkout.		
4.13	Wishlist (signed out)	While signed out, click 'Save for later'.	An error toast asking you to sign in. Nothing is saved.		

Nazmul Commerce

Manual QA test plan - storefront and admin panel

ID	Feature	Steps	Expected result	P/F	Notes
4.14	Wishlist (signed in)	Sign in, click 'Save for later', then click again.	First click saves (heart fills, toast). Second click removes it. The item appears/disappears in /account/wishlist.		
4.15	Share	Click Share.	On mobile the native share sheet opens. On desktop the URL is copied and the button shows 'Copied'.		
4.16	Delivery / warranty / returns panel	Look below the buttons.	Delivery starting price and Dhaka timing, the product's warranty text, and the returns window from settings.		
4.17	Key features	Scroll to 'Key features'.	A ticked list matching what is set on the product in admin.		
4.18	Description	Scroll to 'Description'.	Paragraph breaks from admin are preserved.		
4.19	Specifications table	Scroll to 'Full specifications'.	A striped two-column table of label/value pairs.		
4.20	Ratings summary	Scroll to 'Ratings & reviews'.	Average out of 5, star row, total count, and a 5-to-1 star histogram.		
4.21	Review gating - not purchased	As a signed-in customer who has NOT received this product, look for the review form.	No form. Instead: 'You can write a review once this product has been delivered to you.'		
4.22	Review gating - signed out	Sign out and reload.	A 'Sign in to review a product you have bought' message with a working link.		
4.23	Review submission	As a customer with a DELIVERED order for this product, set a star rating, write 10+ characters and submit.	'Thanks - your review is awaiting moderation.' It does NOT appear publicly until approved in admin.		
4.24	Duplicate review blocked	Try to review the same product twice.	'You have already reviewed this product.'		
4.25	Related products	Scroll to 'You might also like'.	Products from the same category, excluding the one you are viewing.		
4.26	Invalid product URL	Visit /products/this-does-not-exist.	The custom 404 page with links home and to the catalogue.		
4.27	Draft product is hidden	Set a product to Draft in admin, then open its public URL.	404. A draft must never be publicly reachable.		

Nazmul Commerce

Manual QA test plan - storefront and admin panel

5. Cart

CRITICAL: every figure in the cart is calculated by the database function `quote_cart()`. The browser never adds anything up. If a total here disagrees with the checkout total, that is a serious bug.

ID	Feature	Steps	Expected result	P/F	Notes
5.1	Empty cart	Open /cart with nothing in it.	A friendly empty state with a 'Start shopping' button.		
5.2	Line item detail	Add a product with a variant and open the cart.	Image, product name, variant name, unit price, compare-at price, and the line total.		
5.3	Quantity increase	Click + on a line.	Quantity and line total update, and the subtotal and total recalculate.		
5.4	Quantity clamped to stock	Try to raise quantity above available stock.	The + button disables at the stock limit. If stock dropped since adding, a warning explains it.		
5.5	Remove a line	Click Remove.	The line disappears and the totals update. Removing the last line shows the empty state.		
5.6	Valid coupon	With a cart over Tk 5,000, type BIDYUT10 and click Apply.	A green chip shows the code, a Discount row appears (10%, capped at Tk 1,500), and the total drops by exactly that amount.		
5.7	Coupon below minimum	With a cart UNDER Tk 5,000, apply BIDYUT10.	Rejected with 'Your order is below this coupon's minimum spend.' No discount is applied.		
5.8	Invalid coupon	Apply 'NOTAREALCODE'.	'We could not find that coupon code.' The total is unchanged.		
5.9	Expired coupon	In admin set a coupon's expiry to the past, then apply it.	'That coupon has expired.'		
5.10	Paused coupon	Pause a coupon in admin, then apply it.	'That coupon is no longer active.'		
5.11	Per-customer limit	Use WELCOME200 (limit 1 per user) on one order, then try it on a second order with the same account.	'You have already used this coupon.'		
5.12	Remove coupon	With a coupon applied, click the X on the green chip.	The discount is removed and the total returns to the undiscounted amount.		

Nazmul Commerce

Manual QA test plan - storefront and admin panel

ID	Feature	Steps	Expected result	P/F	Notes
5.13	Coupon survives navigation	Apply a coupon, browse to another page, then return to the cart.	The coupon is still applied - it is stored on the cart, not in the browser.		
5.14	Out-of-stock line blocks checkout	Add a product, then set its stock to 0 in admin, then reload the cart.	The line is flagged in red ('Out of stock'), a warning appears, and the 'Proceed to checkout' button is disabled.		
5.15	Partial stock	Have 5 in the cart, then reduce stock to 2 in admin and reload.	'Not enough stock left - only 2 available'. The line total reflects 2, not 5, so the displayed total is never a fantasy.		
5.16	Guest cart persists	As a signed-out visitor, add items, close the tab, reopen the site.	The cart still holds the items (it is keyed to a httpOnly cookie).		
5.17	Guest cart merges on sign-in	Add items while signed out, then sign in to an account that already has different items in its cart.	Both sets are present after signing in. Quantities are summed and clamped to available stock.		
5.18	Cart clears after order	Complete a checkout, then open /cart.	The cart is empty and any coupon is cleared.		

Nazmul Commerce

Manual QA test plan - storefront and admin panel

6. Checkout and payment

SECURITY-CRITICAL section. The checkout form contains no price field of any kind. `place_order()` re-calculates every figure from live catalogue data and ignores anything the browser claims.

ID	Feature	Steps	Expected result	P/F	Notes
6.1	Empty cart redirect	With an empty cart, visit /checkout directly.	You are redirected to /cart.		
6.2	Blocked cart redirect	Put an out-of-stock item in the cart, then visit /checkout.	You are redirected back to /cart to fix it first.		
6.3	Required field validation	Submit the form with everything blank.	Inline errors on name, phone, district, area and house/road. Nothing is submitted.		
6.4	Name too short	Enter a single character as the name and submit.	'Please enter the recipient's full name'.		
6.5	Street too short	Enter 'x' as house & road and submit.	'Enter the house and road so the courier can find you'.		
6.6	Phone - local format	Enter 01712345678.	Accepted.		
6.7	Phone - +880 format	Enter +8801712345678.	Accepted and normalised to 01712345678 on the resulting order. (This previously failed - please test it carefully.)		
6.8	Phone - other formats	Try 8801712345678, then 1712345678, then 017-1234-5678.	All are accepted and normalised to 01712345678.		
6.9	Phone - invalid	Enter 0121234567 (invalid operator prefix) and submit.	'Enter a valid Bangladeshi mobile number'. The order is not created.		
6.10	Delivery fee appears	Select District = Dhaka.	The summary switches from 'Select a district' to Tk 60, and shows 'Inside Dhaka City - 1-2 days'.		
6.11	Delivery fee by zone	Change district to Gazipur, then Chattogram, then Bandarban.	The fee and day range change to the suburbs / divisional / nationwide zone respectively, matching /admin/settings.		
6.12	Free delivery threshold	Build a Dhaka cart over Tk 5,000 and select Dhaka.	Delivery shows 'Free' in green and adds nothing to the total.		
6.13	Total arithmetic	With a coupon and a delivery fee applied, check the maths.	Total = Subtotal - Discount + Delivery, exactly. This is enforced by a database constraint.		

Nazmul Commerce

Manual QA test plan - storefront and admin panel

ID	Feature	Steps	Expected result	P/F	Notes
6.14	Payment methods shown	Look at the Payment method section.	Only Cash on delivery, plus a note that online options appear once credentials are configured. bKash/Nagad/Card must NOT appear as dead options.		
6.15	COD advance warning	Build a cart over Tk 50,000 and select Cash on delivery.	An amber notice explains an advance payment is needed before dispatch. You can still place the order.		
6.16	Guest checkout	Complete checkout while signed out.	The order is created. A note offers signing in to save the address.		
6.17	Saved addresses	Sign in with at least one saved address and open checkout.	Saved addresses are listed as radio options; the default is pre-selected and its fields pre-fill. 'Use a different address' clears them.		
6.18	Save address on order	As a signed-in customer, tick 'Save this address for next time' and order.	The address appears in /account/addresses afterwards.		
6.19	Place order (COD)	Complete every field and click Place order.	You land on the confirmation page with an order number in the form BD-1000xx.		
6.20	Stock decrements	Note a product's stock, order 2 of it, then check stock in admin.	Stock has dropped by exactly 2. Units sold has risen by 2.		
6.21	PRICE TAMPERING (must fail)	Open DevTools, add a hidden input named total_paisa with value 1 to the checkout form, then submit.	The order is created at the CORRECT price. The injected value is ignored entirely. If the order total is Tk 0.01, STOP and report immediately.		
6.22	Concurrent stock race	With stock = 1, open checkout in two browsers and submit both within a second.	Exactly one order succeeds. The other is told stock changed. Stock never goes negative.		
6.23	Coupon usage recorded	Order with a coupon, then check the coupon in admin.	Its 'Used' count has incremented by one.		

Nazmul Commerce

Manual QA test plan - storefront and admin panel

7. Order confirmation and tracking

Tracking needs the order number AND the phone number - order numbers come from a sequence and are therefore guessable on their own.

ID	Feature	Steps	Expected result	P/F	Notes
7.1	Confirmation page	Complete an order.	Thank-you message with your first name, the order number, a full price breakdown, the payment badge, an estimated arrival date and your area/district.		
7.2	Confirmation actions	Click 'Track this order' and 'Keep shopping'.	Tracking opens pre-filled with the order number; Keep shopping returns to the catalogue.		
7.3	Track with correct details	On /track enter the order number and the phone used on the order.	The order appears with a status timeline, item list and totals.		
7.4	Track with wrong phone	Enter a valid order number but a different phone number.	A single generic message: 'No order matches that number and mobile number.' It must NOT reveal that the order exists.		
7.5	Track a non-existent order	Enter BD-999999 with any phone.	The same generic message as 7.4 - identical wording, so the form cannot be used to discover valid order numbers.		
7.6	Track accepts +880	Track using +8801712345678 for an order placed with 01712345678.	The order is found - the phone is normalised before lookup.		
7.7	Timeline progresses	In admin advance the order: Confirmed, Processing, Shipped, Out for delivery, Delivered. Re-track after each step.	The timeline highlights the current step, ticks completed steps in green, and shows the timestamp for each.		
7.8	Cancelled order display	Cancel an order in admin, then track it.	A red 'Cancelled' panel with the reason, instead of the step timeline.		
7.9	No internal data leaks	Track any order and inspect the page.	The internal staff note and product cost are NOT present anywhere in the response.		

Nazmul Commerce

Manual QA test plan - storefront and admin panel

8. Accounts and authentication

ID	Feature	Steps	Expected result	P/F	Notes
8.1	Sign up	Create an account with name, email, optional phone and an 8+ character password.	Either you are signed in, or you are told to check your inbox to confirm (depending on the Supabase email setting).		
8.2	Weak password rejected	Try to sign up with a 4-character password.	'Use at least 8 characters'. No account is created.		
8.3	Profile auto-created	After signing up, open /account.	Your name and email are already populated - a database trigger creates the profile.		
8.4	New users are customers	Sign up, then try to open /admin.	You are redirected away. New accounts are never staff.		
8.5	Sign in	Sign in with correct credentials.	You land on /account (or wherever you were heading).		
8.6	Wrong password	Sign in with a correct email but wrong password.	'That email and password do not match.' The wording must NOT reveal whether the email exists.		
8.7	Unknown email	Sign in with an email that has no account.	The exact same message as 8.6.		
8.8	Return-to after sign-in	While signed out, open /account/orders. Sign in when prompted.	After signing in you land on /account/orders, not the generic account page.		
8.9	Signed-in users skip auth pages	While signed in, visit /sign-in.	You are redirected away - there is no reason to see the sign-in form.		
8.10	Forgot password	Submit your email on /forgot-password.	'If that email has an account, a reset link is on its way.' The same message shows for unknown emails.		
8.11	Reset password	Open the emailed link and set a new password.	The password is changed and you land on your account. The old password no longer works.		
8.12	Expired reset link	Open /reset-password directly, with no token.	'This reset link has expired or has already been used.' - not a broken form.		

Nazmul Commerce

Manual QA test plan - storefront and admin panel

ID	Feature	Steps	Expected result	P/F	Notes
8.13	Sign out	Click Sign out in the account sidebar.	You return to the homepage as a guest and /account is no longer reachable.		
8.14	Protected routes	While signed out, visit /account, /account/orders, /account/addresses and /account/wishlist.	Each redirects to sign-in.		

Nazmul Commerce

Manual QA test plan - storefront and admin panel

9. Customer account area

ID	Feature	Steps	Expected result	P/F	Notes
9.1	Overview tiles	Open /account.	Three tiles - Orders, Wishlist, Addresses - with correct counts, plus your three most recent orders.		
9.2	Update profile	Change your name and phone and save.	'Profile updated.' The header greeting updates to the new first name.		
9.3	Marketing opt-in	Tick the marketing checkbox and save, then reload.	The setting persists.		
9.4	Orders list	Open /account/orders.	Every order you placed, newest first, with number, status badge, item summary, date and total.		
9.5	Order detail	Open an order.	Status timeline, item list with images, price breakdown and the delivery address exactly as entered.		
9.6	Cancel an order	Open an order that is still Placed or Confirmed and cancel it with a reason.	The order becomes Cancelled and every item's stock is returned - verify the stock in admin.		
9.7	Cancel blocked after dispatch	Advance an order to Shipped in admin, then try to cancel it as the customer.	The cancel button is not offered. (If forced via the API it must be refused.)		
9.8	Cannot see other customers' orders	Copy another customer's order URL and open it while signed in as yourself.	404 or empty - row-level security blocks it. This is a hard requirement.		
9.9	Wishlist	Save two products, then open /account/wishlist.	Both appear, most recently saved first, with live prices.		
9.10	Wishlist empty state	Remove everything from the wishlist.	A tidy empty state with a 'Browse products' button.		
9.11	Add an address	Add an address with all fields and mark it default.	It is listed with a 'Default' badge and pre-selects at checkout.		
9.12	Only one default	Mark a second address as default.	The first loses its Default badge. Exactly one default exists at all times.		
9.13	Edit an address	Edit an address and save.	Changes persist and show at checkout.		

Nazmul Commerce

Manual QA test plan - storefront and admin panel

ID	Feature	Steps	Expected result	P/F	Notes
9.14	Delete an address	Delete an address.	It disappears. Past orders that used it are NOT affected - order addresses are snapshots.		
9.15	Address phone validation	Save an address with an invalid phone.	Inline validation error; nothing is saved.		
9.16	Change password	Open /account/password, set a new password.	The change succeeds and the new password works on next sign-in.		

Nazmul Commerce

Manual QA test plan - storefront and admin panel

10. Admin - access control

Test these first. Everything else in the admin panel depends on them holding. Middleware redirects are a convenience; the real enforcement is in the database.

ID	Feature	Steps	Expected result	P/F	Notes
10.1	Signed-out access	Sign out and visit /admin.	You are redirected to sign-in.		
10.2	Customer access	Sign in as an ordinary customer and visit /admin.	You are redirected to the homepage. No admin data is visible at any point.		
10.3	Grant admin	Run: node scripts/make-admin.mjs your@email.com. Sign out and back in.	/admin opens and the black Admin button appears in the storefront nav.		
10.4	Manager restrictions	Set an account to manager (make-admin.mjs email manager) and sign in.	The admin panel opens, but 'Settings' is absent from the sidebar and /admin/settings redirects away.		
10.5	Manager cannot change roles	As a manager, open /admin/customers.	Roles are shown as read-only badges, with no dropdown.		
10.6	Admin cannot demote themselves	As an admin, try to change your own role on /admin/customers.	Your own row shows a 'You' badge and cannot be edited.		
10.7	Admin pages are not indexed	View source on an admin page and check /robots.txt.	Admin carries a noindex directive and /admin is disallowed in robots.txt.		

Nazmul Commerce

Manual QA test plan - storefront and admin panel

11. Admin - dashboard, products and stock

ID	Feature	Steps	Expected result	P/F	Notes
11.1	Dashboard tiles	Open /admin.	Eight tiles: today's sales, this month, gross margin, pending orders, delivered, customers, low stock, reviews to moderate. Figures match reality.		
11.2	Dashboard tiles link	Click the Pending orders, Customers, Low stock and Reviews tiles.	Each opens the matching filtered page.		
11.3	Revenue chart	Look at the 30-day chart.	Placing a new order today raises today's point. Cancelled and returned orders are excluded.		
11.4	Best sellers panel	Check the best-sellers list.	Ordered by units sold, with thumbnails and prices.		
11.5	Low stock table	Check the low-stock table.	Lowest stock first, colour-coded, with an OK / Low / Out of stock badge.		
11.6	Product list	Open /admin/products.	Every product with thumbnail, SKU, category, price, MARGIN, stock, units sold and status.		
11.7	Margin visible to staff only	Compare the margin column with the storefront.	Margin and cost appear in admin but are absent from every public page and API response. (Cost is revoked at the database column level.)		
11.8	Product search	Search by name, then by SKU.	Both narrow the list correctly.		
11.9	Status filter	Click All / Active / Draft / Archived.	The list filters accordingly.		
11.10	Create a product	Click New product, fill name, SKU, price, stock, set status Active, save.	The product is created and immediately visible on the storefront.		
11.11	Slug auto-generation	Create a product leaving Slug blank.	A URL-safe slug is generated from the name.		
11.12	Duplicate SKU rejected	Create a product reusing an existing SKU.	'That slug or SKU is already in use.' Nothing is saved.		

Nazmul Commerce

Manual QA test plan - storefront and admin panel

ID	Feature	Steps	Expected result	P/F	Notes
11.13	Compare-at validation	Set a compare-at price LOWER than the selling price and save.	'The compare-at price must be higher than the selling price.' Saved only when corrected.		
11.14	Features and specs parsing	Enter features one per line, and specs as 'Label: value' one per line. Save and view the product page.	Features render as a ticked list; specs render as a two-column table.		
11.15	Prices entered in Taka	Enter 1234.50 as the price, save, and view the storefront.	It displays as Tk 1,234.50. (Stored internally as paisa - you never type paisa.)		
11.16	Edit a product	Change the name and price of an existing product and save.	Changes appear on the storefront (allow up to 5 minutes for the cached homepage).		
11.17	Publish / unpublish	Click the eye icon on an Active product, then again.	It toggles between Active and Draft. A Draft product 404s publicly.		
11.18	Archive	Archive a product.	It leaves the storefront but past orders containing it still display correctly - orders keep their own snapshot.		
11.19	Stock page	Open /admin/stock.	Counters for out-of-stock, low and tracked products, plus an editable table sorted lowest-first.		
11.20	Inline stock edit	Change a stock number and click away (or press Enter).	It saves immediately with a green tick. Reload to confirm it persisted.		
11.21	Negative stock rejected	Try to set stock to -5.	Rejected; the value reverts.		
11.22	Variant stock roll-up	Change a variant's stock, then look at the parent product's stock.	The parent equals the sum of its active variants - maintained by a database trigger.		

Nazmul Commerce

Manual QA test plan - storefront and admin panel

12. Admin - categories, orders and payments

ID	Feature	Steps	Expected result	P/F	Notes
12.1	Category list	Open /admin/categories.	All categories with slug, icon, product count, position and status.		
12.2	Create a category	Create one with a Lucide icon name (e.g. Headphones) and a position.	It appears in the storefront nav and the homepage category grid with that icon.		
12.3	Invalid icon name	Set the icon to 'NotARealIcon' and save.	The tile falls back to a default package icon rather than crashing the homepage.		
12.4	Reorder categories	Change positions and reload the storefront.	Nav and grid order follow the position values (lowest first).		
12.5	Deactivate a category	Untick Active.	It disappears from the storefront nav but its products remain reachable.		
12.6	Delete blocked while in use	Try to delete a category that has products.	'N products still use this category. Move them first...' Nothing is deleted.		
12.7	Delete an empty category	Create an empty category and delete it.	It is removed.		
12.8	Order list	Open /admin/orders.	All orders with number, customer, destination, item count, total, payment and status.		
12.9	Order status tabs	Click each status tab.	The list filters to that status.		
12.10	Order search	Search by order number, then by phone, then by customer name.	All three find the order.		
12.11	Order detail	Open an order.	Fulfilment controls, timeline, items, totals, customer contact, shipping address, customer note and the internal note box.		
12.12	Legal transitions only	Look at the buttons offered for a Placed order.	Only Confirmed and Cancelled. You cannot jump straight to Delivered.		
12.13	Advance an order	Move an order Placed to Confirmed to Processing to Shipped to Out for delivery to Delivered.	Each step succeeds, is timestamped, and appears on the customer's tracking page.		

Nazmul Commerce

Manual QA test plan - storefront and admin panel

ID	Feature	Steps	Expected result	P/F	Notes
12.14	Status note reaches the customer	Add a note when changing status, then view the customer tracking page.	The note appears against that step.		
12.15	COD settles on delivery	Mark a COD order Delivered, then check /admin/payments.	Its payment status becomes 'successful' automatically.		
12.16	Cancel restores stock	Note a product's stock, cancel an order containing it, then re-check.	Stock is restored by exactly the ordered quantity and units sold is reduced.		
12.17	Terminal statuses	Open a Cancelled order.	No further transitions are offered, and a note explains why.		
12.18	Internal note is private	Save an internal note, then view the same order as the customer and on /track.	The note is invisible to the customer in both places.		
12.19	Payments page	Open /admin/payments.	Collected and outstanding totals, the list of live payment methods, and a row per payment attempt with its gateway reference.		
12.20	Payment method gating	Check the 'Live methods' card.	Only Cash on delivery until bKash/Nagad/card credentials are added AND the id is listed in PAYMENTS_ENABLED_PROVIDERS.		

Nazmul Commerce

Manual QA test plan - storefront and admin panel

13. Admin - customers, coupons, banners and reviews

ID	Feature	Steps	Expected result	P/F	Notes
13.1	Customer list	Open /admin/customers.	Every registered account with name, email, phone, order count, lifetime spend, join date and role.		
13.2	Customer search	Search by name, email and phone.	All three work.		
13.3	Spend excludes cancellations	Cancel one of a customer's orders and re-check their spend.	The cancelled order's value is excluded.		
13.4	Promote a customer	As an admin, change a customer's role to manager, confirm the prompt.	The role updates. That account can now open /admin but not /admin/settings.		
13.5	Coupon list	Open /admin/coupons.	Every coupon with discount, minimum order, usage, window and a Live / Paused / Expired / Used up badge.		
13.6	Create a percentage coupon	Create a 15% coupon with a Tk 1,000 minimum and a Tk 500 cap.	It applies at checkout, respects the minimum, and never discounts more than Tk 500.		
13.7	Create a fixed coupon	Create a flat Tk 300 coupon.	It reduces the total by exactly Tk 300.		
13.8	Percentage over 100 rejected	Try to save a percentage coupon with value 150.	'A percentage discount cannot exceed 100.'		
13.9	Duplicate code rejected	Create a coupon reusing an existing code.	'That code already exists.'		
13.10	Pause a coupon	Pause a coupon, then try to use it at checkout.	It is rejected as inactive.		
13.11	Usage limit	Set a coupon's total usage limit to 1 and use it once, then try again from another account.	The second attempt is rejected as exhausted.		
13.12	Banner list	Open /admin/banners.	Every banner grouped by placement, with a preview image and its priority.		
13.13	Create a hero banner	Create a hero banner with eyebrow, title, subtitle, image URL, button label/link and an accent hex.	It appears in the homepage carousel and the accent colour tints the gradient.		

Nazmul Commerce

Manual QA test plan - storefront and admin panel

ID	Feature	Steps	Expected result	P/F	Notes
13.14	Banner priority	Give a banner the highest priority.	It becomes the first hero slide.		
13.15	Invalid accent colour	Enter 'blue' as the accent hex and save.	'Accent must be a hex colour like #1B4DFF.'		
13.16	Hide a banner	Untick 'Show on the storefront'.	It disappears from the homepage but remains editable in admin.		
13.17	Delete a banner	Delete a banner and confirm.	It is removed from both admin and the homepage.		
13.18	Offer card placement	Create a banner with placement 'Offer card'.	It appears in the three-up card row, not the hero.		
13.19	Review moderation queue	Open /admin/reviews.	Pending reviews with rating, verified-purchase badge, author, product and body.		
13.20	Approve a review	Approve a pending review, then open that product's page.	The review is publicly visible AND the product's average rating and count have updated.		
13.21	Reject a review	Reject a review.	It never appears publicly and does not affect the rating.		
13.22	Un-approve a review	Approve then reject the same review, and watch the product rating.	The rating rolls back correctly - the rollup is maintained by a database trigger.		
13.23	Verified purchase flag	Compare a review from a delivered order with one from an account without a delivered order.	Only the genuine purchase shows 'Verified purchase'. The flag is set by the database, never by the reviewer.		

Nazmul Commerce

Manual QA test plan - storefront and admin panel

14. Admin - reports and settings

ID	Feature	Steps	Expected result	P/F	Notes
14.1	Report windows	Open /admin/reports and switch between 7, 30, 90 and 180 days.	Every figure and the chart recalculate for the chosen window.		
14.2	Revenue and profit tiles	Check the eight tiles.	Revenue, gross profit, cost of goods, average order, discounts given, delivery collected, cancellations and margin percentage.		
14.3	Margin maths	Compare gross profit against revenue minus cost of goods.	They agree. $\text{Margin \%} = \text{gross profit} / \text{revenue}$.		
14.4	Products without cost	Check a product that has no cost recorded.	Its margin shows as a dash rather than a misleading 100%.		
14.5	Product performance	Check the performance table.	Top 20 by revenue, with units, revenue, profit and margin per product.		
14.6	Payment mix	Check the payment mix panel.	A bar per method with counts and percentages that sum to 100%.		
14.7	Cancelled orders excluded	Note the revenue, cancel an order in the window, then reload.	Revenue falls by that order's value.		
14.8	Settings page (admin only)	Open /admin/settings as an admin.	Editable store configuration plus the delivery zone manager.		
14.9	Change the store name	Change store_name and save, then open the storefront.	The header, footer and page titles all use the new name.		
14.10	Change support details	Change support_phone and support_hours, then check the storefront.	The header strip, footer and contact page all update.		
14.11	Structured settings are read-only	Look at social_links and currency.	Shown as read-only JSON with an explanation - a malformed value here would break the storefront.		
14.12	Edit a delivery zone	Change the Inside Dhaka fee to Tk 80 and save. Then run a checkout to Dhaka.	Checkout charges Tk 80. The footer table also shows Tk 80. No deploy needed.		
14.13	Free-delivery threshold	Change a zone's 'Free above' value, then test a cart above and below it.	Delivery is free above the threshold and charged below it.		

Nazmul Commerce

Manual QA test plan - storefront and admin panel

ID	Feature	Steps	Expected result	P/F	Notes
14.14	Add a delivery zone	Create a zone listing specific districts.	Checkout to one of those districts uses the new zone's fee and timing.		
14.15	Day range validation	Set maximum days lower than minimum days.	'Maximum days cannot be less than minimum days.'		
14.16	Fallback zone	Check out to a district not listed in any zone.	The fallback zone ('Rest of Bangladesh') is applied - never a missing or zero fee.		

Nazmul Commerce

Manual QA test plan - storefront and admin panel

15. Cross-cutting: responsive, SEO, errors and security

ID	Feature	Steps	Expected result	P/F	Notes
15.1	Mobile - homepage	Open the homepage on a real phone (or a 375px window).	No horizontal scrolling anywhere. Hero text is readable and never overlapped by the carousel controls.		
15.2	Mobile - navigation drawer	Open the hamburger drawer on a phone.	It covers the full screen height with every category listed. (This was previously broken - please confirm.)		
15.3	Mobile - listing and filters	Browse the listing and open the Filters sheet on a phone.	Two columns of cards; the filter sheet opens from the bottom and closes cleanly.		
15.4	Mobile - product page	Open a product on a phone.	Gallery, buy box, specs and reviews all stack readably. Buttons are comfortably tappable.		
15.5	Mobile - cart and checkout	Complete a full purchase on a phone.	Every field is reachable, the keyboard does not obscure the submit button, and the order completes.		
15.6	Tablet	Repeat the key pages at ~768px.	Layouts adapt without overlap or clipping.		
15.7	Page titles	Check the browser tab on the homepage, a category, a product and the cart.	Each has a distinct, descriptive title ending in 'Nazmul'.		
15.8	Product structured data	View source on a product page and search for application/ld+json.	Valid Product schema with price, currency BDT and availability.		
15.9	Sitemap	Open /sitemap.xml.	Homepage, listing, categories, all active products and the policy pages. No admin, cart or checkout URLs.		
15.10	Robots	Open /robots.txt.	/admin, /account, /checkout, /cart, /api/ and /order/ are disallowed; the sitemap is referenced.		
15.11	404 page	Visit /this-page-does-not-exist.	The branded 404 with links home and to the catalogue - not a raw framework error.		
15.12	Policy pages	Open About, Contact, FAQ, Shipping, Delivery, Returns, Warranty, Privacy, Terms and Authenticity.	All render with real content. Shipping and Delivery show the live delivery-zone table.		

Nazmul Commerce

Manual QA test plan - storefront and admin panel

ID	Feature	Steps	Expected result	P/F	Notes
15.13	FAQ accordion	Open /faq and click several questions.	Each expands and collapses; the + rotates.		
15.14	Cost never leaks	On a product page, open DevTools, and search the HTML and every network response for the cost value.	The purchase cost appears NOWHERE. It is revoked at the database column level for public roles.		
15.15	Coupon codes are not enumerable	While signed out, try to read the coupons table through the public API.	Nothing is returned. Coupons have no public read policy.		
15.16	Cannot read another user's data	Signed in as customer A, try to fetch customer B's orders and addresses via the API.	Empty results. Row-level security scopes every read to the signed-in user.		
15.17	Cannot create an order directly	Try to POST a row into the orders table through the public API.	Refused. Orders have no insert policy - only the server-side place_order() function can create them.		
15.18	Session persistence	Sign in, close the browser, reopen the site.	You are still signed in.		

Nazmul Commerce

Manual QA test plan - storefront and admin panel

16. Homepage campaign tiles

Tall portrait cards with a Bangla headline over the artwork, driven by banner rows with placement 'category_tile'. Everything about them is editable at /admin/banners.

ID	Feature	Steps	Expected result	P/F	Notes
16.1	Tiles render	Open the homepage and scroll to 'Featured collections'.	A horizontal row of tall cards, each with a Bangla headline across the top and a title, caption and link at the bottom.		
16.2	Bangla renders correctly	Look closely at the Bangla headline on each tile.	Real Bangla letterforms - NOT empty boxes, question marks or garbled marks. Conjuncts join properly.		
16.3	Tiles scroll	Drag or scroll the row sideways, on desktop and on a phone.	It scrolls smoothly and snaps to cards. No scrollbar is visible and the page itself never scrolls sideways.		
16.4	Tile links	Click each tile.	Each opens the category it advertises - Gaming Zone to gaming accessories, Audio Paradise to earbuds, and so on.		
16.5	Hover effect	Hover a tile on a desktop.	The photograph scales up slightly inside the rounded frame and the arrow nudges right. The frame itself does not move.		
16.6	Text stays readable	Check the caption over the lightest part of each photograph.	The bottom gradient keeps the title and caption legible on every tile.		
16.7	Edit a tile in admin	In /admin/banners edit a Category tile - change its Bangla eyebrow, title, caption and link. Save, then reload the homepage.	Every change appears (allow up to 5 minutes for the cached homepage).		
16.8	Accent colour	Change a tile's accent hex and reload.	The colour wash over the top of that tile changes to match.		
16.9	Add a tile	Create a banner with placement 'Category tile', an image URL and a priority.	It joins the row in priority order, highest first.		
16.10	Hide a tile	Untick 'Show on the storefront' on one tile.	It disappears from the homepage and the rest close up with no gap.		
16.11	Section hides when empty	Deactivate every category tile and reload.	The whole 'Featured collections' section disappears - no empty heading.		

Nazmul Commerce

Manual QA test plan - storefront and admin panel

17. Manual bKash / Nagad payment - customer

Requires migration 0015 applied AND bkash/nagad listed in PAYMENTS_ENABLED_PROVIDERS. The customer sends money themselves and submits proof; nothing marks the order paid except a staff decision.

ID	Feature	Steps	Expected result	P/F	Notes
17.1	Method appears at checkout	With bkash enabled, go to checkout.	bKash appears alongside Cash on delivery, described as sending money then submitting the transaction ID.		
17.2	Redirected to the payment page	Choose bKash and place the order.	You land on /order/pay with your order number, NOT on the normal confirmation page.		
17.3	Amount and number shown	Read the 'Send exactly' step.	The exact order total and the store's bKash number, with the account type (Personal/Agent/Merchant).		
17.4	Copy the number	Tap the number.	It copies to the clipboard and the button confirms 'Copied'.		
17.5	Submit without a screenshot	Enter a transaction ID, the sending number and the order's mobile number. Leave the screenshot empty and submit.	Accepted - the screenshot is encouraged but optional. A panel confirms it is awaiting verification.		
17.6	Submit with a screenshot	Repeat, attaching a JPG or PNG.	A thumbnail preview appears before submitting and can be removed. Submission succeeds.		
17.7	Oversized screenshot rejected	Attach an image larger than 5 MB.	'That screenshot is larger than 5 MB.' Nothing is uploaded.		
17.8	Wrong file type rejected	Attach a PDF or a GIF.	Rejected as an unsupported image type.		
17.9	Wrong order phone rejected	Enter a mobile number that is not the one on the order.	'No order matches that number and mobile number.' Nothing is recorded and no file is stored.		
17.10	Duplicate transaction ID rejected	Submit a transaction ID that was already used on a different order.	'That transaction ID has already been submitted against another order.' CRITICAL - this is what stops one payment being claimed twice.		
17.11	Order is not marked paid	After submitting, track the order.	Payment status is still pending. Submitting proof must NEVER mark an order paid by itself.		

Nazmul Commerce

Manual QA test plan - storefront and admin panel

ID	Feature	Steps	Expected result	P/F	Notes
17.12	Resubmission after a mistake	Submit again with a corrected transaction ID.	The newer submission replaces the old one and any previous rejection reason is cleared.		
17.13	Page for a COD order	Open /order/pay?ref= with a COD order number.	A tidy 'Nothing to pay here' message with a link to tracking - not a 404.		
17.14	Already-verified order	Open the payment page for an order that was already approved.	'This payment has already been verified' and no form.		

Nazmul Commerce

Manual QA test plan - storefront and admin panel

18. Manual payment verification - admin

The queue sits at the top of /admin/payments and needs the Payments permission.

ID	Feature	Steps	Expected result	P/F	Notes
18.1	Queue badge	With at least one submission pending, look at the admin sidebar.	An amber count sits next to Payments.		
18.2	Queue contents	Open /admin/payments.	'Awaiting verification' is first on the page, listing each submission with order number, customer, transaction ID, sending number, expected amount and submission time.		
18.3	View the screenshot	Click 'View screenshot' on a submission.	The image loads inline. Clicking it opens full size in a new tab.		
18.4	Screenshots are private	Copy a screenshot URL, then open it in a private window a few minutes later.	It expires and stops working. CRITICAL - proofs must never be reachable by URL guessing.		
18.5	Approve a payment	Click 'Verify & confirm order' and accept the prompt.	Payment becomes successful, the order moves Placed to Confirmed, and the customer's tracking page shows 'Payment verified'.		
18.6	Approval is attributed	Look at the card after approving.	'Verified by on '. The decision is recorded against a named account.		
18.7	Reject a payment	Reject one with a reason such as 'no matching transaction'.	Payment becomes failed and the reason is stored.		
18.8	Rejection does not cancel the order	Check the order after rejecting.	The order is still open so the customer can correct the ID and resubmit. It must NOT be auto-cancelled.		
18.9	Approval is idempotent	Approve, then try to act on the same payment again.	No further buttons are offered and the payment stays successful.		
18.10	No permission, no verification	As a manager WITHOUT the Payments permission, open /admin/payments.	You are redirected to the dashboard, and Payments is absent from the sidebar.		
18.11	Receive numbers are editable	In /admin/settings change bkaash_receive_number, then reopen a payment page.	The new number is shown. No deploy needed.		

Nazmul Commerce

Manual QA test plan - storefront and admin panel

19. Staff and permissions

Admin-only. Admins are unrestricted; managers get exactly the sections ticked for them.

ID	Feature	Steps	Expected result	P/F	Notes
19.1	Staff page is admin-only	Open /admin/staff as a manager.	Redirected away, and Staff is absent from their sidebar.		
19.2	Staff list	Open /admin/staff as an admin.	Every admin and manager, with their role and - for managers - the sections they hold.		
19.3	Add by email	Click 'Add a staff member', type the email of an existing account and click Find.	The account is found and shown by name.		
19.4	Unknown email	Search an email with no account.	'No account with that email. Ask them to sign up first' - it does not create the user.		
19.5	Grant a manager limited access	Add them as Manager with only Orders and Products ticked.	They are added with exactly those two grants.		
19.6	Manager sees only their sections	Sign in as that manager and open /admin.	The sidebar shows Dashboard, Orders and Products only. Coupons, Reports, Customers and the rest are absent.		
19.7	Direct URL is blocked too	As that manager, type /admin/reports into the address bar.	Redirected to the dashboard. CRITICAL - hiding the link is not enough, the page itself must refuse.		
19.8	Actions are blocked too	As that manager, try to trigger a coupon change through the API.	Refused. The SQL function re-checks the permission independently of the UI.		
19.9	Change someone's grants	Add Reports to that manager and save. Have them reload.	Reports appears in their sidebar and opens.		
19.10	Revoke a section	Untick Orders and save.	It disappears from their nav and the page redirects if they try it directly.		
19.11	Manager with nothing granted	Save a manager with zero sections ticked.	A red warning says they will only see the dashboard.		

Nazmul Commerce

Manual QA test plan - storefront and admin panel

ID	Feature	Steps	Expected result	P/F	Notes
19.12	Promote to admin	Change a manager to Admin.	The permission grid disappears with a warning that admins are unrestricted. They now see every section including Staff and Settings.		
19.13	Demote to customer	Set a staff member's role to Customer.	They lose admin access entirely; their orders and account are untouched.		
19.14	Cannot edit yourself	Find your own row on /admin/staff.	It is marked 'You' with no edit button. CRITICAL - this is what prevents an admin locking themselves out.		
19.15	Settings and Staff are not grantable	Look at the permission checkboxes for a manager.	Settings and Staff are not offered at all, with a note explaining why.		
19.16	Existing managers keep access	After applying migration 0015, sign in as a manager who existed beforehand.	They still have every section they had before - the migration backfills their grants rather than locking them out.		

Nazmul Commerce
